Product architecture

Rural coverage:

Maximizes high-band coverage and achieves better load-balancing, cell-coverage, throughput, indoor coverage and subscriber satisfaction. Especially relevant when upgrading existing sites with new frequencies.

High capacity:

Increases CINR and maximizes spectrum efficiency (b/s/Hz), improving network throughput. Allows addition of more sub scribers and maximizes the value of the investment in network and spectrum.

Indoor penetration/urban coverage:

Significantly improves indoor coverage in both rural and urban environments by upgrading the quality of the “last mile”. This allows all users to enjoy all spectrum and secure high-band coverage, even deep indoors. users to enjoy all spectrums and secure high-band coverage, even deep indoors.
