The CellMax new form factor multiband antennas extends line of the ultra-wide band antennas, combining wide band width in the high bands with wide band in the low bands, still featuring exceptionally low insertion loss in a compact package.

The design aims at low differences between the ports in terms of gain (per band), azimuth and elevation patterns, and a very good electrical tilt precision. New for these antennas is the built-in aim in the bottom plate, which can help making sure the antenna is also mechanically aimed correctly, allowing the antenna potential to the highest in the industry cell throughput to come to fruition.

## RET info

Type CMA-RET-02

The RET actuator is AISG compatible and signals Single-Antenna RET Device type 0x01 (hex) in AISG protocol layer 2 as described in 3GPP TS25.462 (a.k.a. TYPE 1).

One RET actuator per antenna column, with individual AISG connectors in and out. The antenna columns are R1, Y1 and Y2.

Type CMA-RET-02

RET spare part order number: 110086.
